AFTER HARVEST · FLADDY

Slides that *sell*

The slide guide: Jason Fladlien's method, our look, and how to build every slide, step by step.

Version 1 · 29 October 2026

github.com/seeeadd/fladdy · guide/

START HERE

How to use this guide

Read it once, front to back. After that you only need part 4 (the process) and part 5 (the checklists) open while you work.

This guide is for anyone who makes slides for After Harvest: the YouTube videos, the VSL, webinar decks and the Day 1-3 decks we build for clients. It puts three things in one place:

- **The method** (part 1): how Jason Fladlien designs slides that sell, rule by rule, in his own words, each with the minute and second in his video so you can watch him say it.
- **Our look** (parts 2 and 3): the After Harvest brand kit and the eleven slide layouts that Sean approved as the base (the light set).
- **The work** (parts 4 to 7): the step-by-step process, the checklists, the audit of our current slides against Jason's method, and the decisions that are still Sean's to make.

> **Three things to remember if you remember nothing else**
>
> 1. Ask "*How do we show this?*" of every line, and answer with a real thing: a screenshot, a receipt, a real photo `[37:09]`.
> 2. The most important words are the biggest. Titles, names, numbers and prices usually are not `[1:55]`.
> 3. Slides are free. One idea per slide, each part appearing as it is said `[6:09, 21:18]`.

Where the rules come from, and which one wins

Jason's rules come from his video *How to Design Webinar Slides (Nobody Does This Right)* (43 min, youtube.com/watch?v=rAwgv2hThVw), torn down line by line in the repo. Timestamps like `[24:35]` point into that video. A few rules come from his other three videos and are marked with the video's name. Sean's rulings (in his words, dated) sit in `rulings.md`.

When they disagree, Sean's ruling wins until he decides otherwise. Every disagreement is listed in part 7.

Contents

Part 1	The method: Jason Fladlien's rules for slides	34 rules in seven groups
Part 2	Our look: the After Harvest brand kit	colour, type, the face, real pictures, props, marks, never
Part 3	The layouts	the eleven approved slides, and the six still to make
Part 4	The process	from a script line to a finished slide, ten steps
Part 5	Checklists	per slide, per deck, before it goes to Sean
Part 6	Audit of the current slides	the light set against Jason's method
Part 7	Decisions for Sean	where Jason and our look disagree

PART 1

The method

Jason Fladlien has designed "32 PowerPoint presentations that have generated over seven figures a piece" [0:00]. In this video he redesigns nine of his followers' decks, before and after. These are his rules.

His whole argument in one line: designers *"go for form and not function. See, you'll get something that looks really nice, but will also crush your conversions"* [0:18]. Every rule below is about function: what is biggest, what is real, and what appears when.

1.1 The mindset

R1

Design to persuade, not to decorate

"These are design principles that are functional. They're made to persuade. They augment the information and the education that you're using to have the transformation occur." [42:18]

WHAT IT MEANS A slide exists to move the viewer one step closer to a belief. Anything on it either helps that or gets in the way.

IN FLADDY Before you design, write the belief the slide must leave (part 4, step 2). Judge the finished slide against that belief, not against how nice it looks.

R2

Too pretty can cost trust

"If you look too professional on the designs, you're less trustworthy on the webinar … It's better to look ugly with design than it is to look pretty because they'll get distracted by the glitz and the glamour and they'll also trust you less." [15:46-16:12]

WHAT IT MEANS "You are not selling design to designers." Glossy, agency-style slides read as marketing.

IN FLADDY Sean's ruling is "nicely made, not messy", so we do not go ugly. We keep the spirit: crafted, but warm and real, never slick (no gradients, glows, neon, stock models). See part 7, question 1.

R3

Functional beats cool, and pretty has a price

"This looks cool but it's not functional. This looks less cool but it is way more functional and it's also easier to design." [12:45] "Making it look pretty like this takes like 10 more minutes or 30 more minutes per slide." [36:47-37:06]

IN FLADDY Spend design time where it moves the belief: the mechanism slide, the proof, the reveal. A plain list is fine for a plain point.

R4 **They came for the information**

"When people are on webinars, they care about information. They don't care about design." [40:15]

IN FLADDY If a design choice makes the information slower to read, the information wins.

1.2 Show, don't tell

R5 **Ask "How do we show this?" of every slide**

"'How do we show this?' This is always the question I ask myself when I design slides." [37:09]

WHAT IT MEANS For "12 weekly live build sessions every single Wednesday" he did not write the sentence. He drew the weeks, the days, and the 12 sessions popping into the calendar, then the calendar "getting filled with more more more value" [37:09-37:31].

IN FLADDY Every slide spec has a "how do we show this" line (part 4). For After Harvest the answers are usually things we already have: a lead's real landing page, a dream page, the revenue calculator, a real email, a real registrant number, a real chat.

R6 **Show the thing itself**

"I didn't say you post. I showed the post from LinkedIn." [17:35] *"We use words too much and we use visuals too little."* [4:19]

DO Show the post, the inbox, the page, the receipt. DON'T Write "you post on LinkedIn" over an icon.

R7 **Real proof first; stock last; AI almost never**

"I do not like AI for design hardly at all. But there's a couple instances where it's okay" [7:22] … *"We only go to stock when we really don't have anything else."* [9:07]

WHAT IT MEANS For Marvin's story he wanted the real photos of him in the seminar rooms, the real receipts ("the amounts of money that he paid because this will become a price anchor later" [8:16-8:29]), the real houses before and after. AI was allowed only to fill a missing real photo or to animate a real document [7:29-7:46, 10:07].

IN FLADDY Order of choice: our own real thing, then a real thing from the person we are talking about (their page, their post), then a licensed stock photo marked as a placeholder (file name starts `stock-`), which gets replaced before the video ships.

R8

Screenshot the reality, and show the source

"We want to show it in the real world visually as much as possible. Not metaphorically, not conceptually, not with AI generated images. Screenshots are your best friend on a webinar." *[20:05-20:17]* *"I go to the actual source and I screenshot it. I still put the source underneath of it. I highlight the key part."* *[20:43-20:50]*

HOW

- Do the real search or open the real page; screenshot the pieces.
- Remove the noise (sidebars, browser chrome); combine pieces on one slide if needed [19:36-19:43].
- Put the source line under it: where it is from and the date.
- Highlight only the key line.

R9

Make numbers countable

"People don't understand numbers very well ... if I tell you think of 30, you have trouble thinking of it." *[9:39]*

WHAT IT MEANS 30 houses lost became 30 house emojis, or "a house a day for 30 days" on a calendar [9:58]; 350 build hours became 350 clocks [35:42]; 100 viewers became a grid of 100 faces [18:42]. A changed number can be shown on the real document: the 8 of a credit score 820 crossed out, a 5 written in [10:15].

IN FLADDY Registrants, buyers, days and years are all countable. "Nine years" is nine crossed-off calendars before the one launch.

R10

Carry a metaphor all the way, or drop it

"If we're going to use the metaphor of the hamster wheel, then visually we have to stay consistent with it." *[16:20]* *"He's using the word levels, but he's not showing it in levels."* *[24:19]* *"I don't think we need a metaphor at all."* *[32:08]*

IN FLADDY The harvest is our brand metaphor. Where it fits the point (sow on Day 1, harvest on Day 3), carry it fully. Where it does not, show the real thing instead. Never mix two metaphors on one slide.

R11

Storyboard: extend the same visuals across slides

"You can do so much with arrows and screenshots that it's insane." *[18:54]*

WHAT IT MEANS Andrew's LinkedIn post became "RIP" after 6 hours, then seven posts for seven days each to RIP, then calendars and a hundred people [16:52-18:42]. The same pictures return and change, so the slides tell one story.

IN FLADDY The Launch Lab ticket, the Jay chat and the three days should each return and change rather than appear once.

1.3 Hierarchy and type

R12 Never make the least important thing the biggest

"They make the least important thing the biggest thing and therefore the center and focus of attention when it should be the other way around." *[1:55]* *"You've been taught wrong about PowerPoint your whole life."* *[13:09]*

USUALLY LEAST IMPORTANT the title [13:18], the presenter's name ("they already know who he is" [11:31]), the system's name [23:42], numbers ("Why we like to make numbers the biggest thing on our slide? I will never understand" [35:13]), step numbers [33:24], the price [41:22].

IN FLADDY Ask: which words carry the belief? Those are the biggest. A section title like "step 3:" goes small top left.

R13 Titles tell the story, in active voice

"You want to tell a story with the titles as much as possible." *[22:52]*

WHAT IT MEANS Alex's label became a question: "If you know what to do, why doesn't it stick?" "This progresses the story in an active voice" [26:05-26:16].

DO "Same list. Why does the event sell more?" DON'T "Why events sell more".

R14 Read top to bottom

"We should not design things to go from left to right when it comes to list and bullet points and such. We should design them from go from top to bottom." *[1:26]*

Side by side is fine only for a true sequence of events [32:52]. No sideways text, no ladders that read bottom up [32:12].

R15 Two colours

"This is a great way to keep design simple but make the important information that you want to convey stand out." *[7:06]*

The key piece is bolder, a little bigger, and in the second colour [10:44]. Colours may separate the steps of a process [33:37].

IN FLADDY Ink plus rust. Sage is a ground (a band or a field), not a second accent. The props keep their own colours but stay small and at the edges.

R16 Design inside one sentence

"Even though it's one sentence, I'm making it as easy as possible for the audience to take in." *[7:55-8:06]*

The less important half of a line goes smaller, same font, maybe a lighter weight.

R17 **One font, a few faces**

"Just one font. Couple different faces. So there's bold, there's semibold, and then there's normal. And then that's it." [33:10] Italics: *"I tend to not use them."* [13:35]

IN FLADDY Sean's ruling gives us three type voices (part 2.3). House rule: at most two voices on one slide, plus the small source line. See part 7.

R18 **Bigger fonts**

"Bigger fonts are better than smaller fonts functionally. Design-wise, they don't look as nice." [14:02] *The best buyers are "30, 40, 50 plus" with worse eyesight, "including me"* [14:17-14:33].

IN FLADDY At 1920 x 1080: headline 112-176px, the key line 56px or more, a supporting line 40px or more, source lines 18-20px. YouTube is watched on phones.

R19 **No abbreviations, no numbering you can count**

"I would not make it sig speech because they don't know what sig necessarily is" [40:45]. No numbering when "you can count three" [28:10]; step numbers stay tiny [33:32].

1.4 Cut what does not persuade

R20 **Minimalism: remove what does not persuade**

Elements that "don't add to the persuasive capabilities and so therefore they detract." [5:34-5:52]

WHAT HE REMOVES decorative swooshes and logos, stock photos, taglines (keep one on the title slide at most), the presenter's name, highlighter graphics, icons, glows, background images, "level" labels, step numbers, the presenter's photo on the CTA, extra calls to action [5:37-41:34].

IN FLADDY Our props are a deliberate exception (Sean wants slides full and a little playful). The limit: two props a slide, at the edges, never near the key words, and each should mean something.

R21 **Noise only as overwhelming proof**

"If I'm going to use a lot of noise on a slide, which I tend to avoid, it's going to be overwhelming proof." [27:57]

A wall of before-and-after photos or results is the one place where a crowded slide is right.

R22 **Elaborate designs trap you**

"If you have a very elaborate design, you have to stay within the containment of that design." [33:47]

A step slide reuses the mechanism slide's own element instead of a new decoration [34:25].

R23 **Type over a photo, done right**

Nothing key in the photo behind the words; put a black box over it at lowered opacity so the image "peaks through" and the type lives on top [39:22-40:01].

1.5 Many slides, built in order

R24 **Slides are free**

"I don't use just one slide to tell a story. Slides are free. So, we should use as many of them as we possibly can." *[6:05-6:09]*

Marvin's one bio slide became eight, one line each [6:45]. The exception: keep two things on one slide when splitting would break the context ("Two words, two dollar figures, one slide" [28:57-29:28]).

R25 **Motion every six seconds**

"My average webinar presentation is about 500 slides … Typically you see motion on my designs every six seconds." *[28:44-28:52]*

IN FLADDY In a teaching stretch, something new appears every 5-10 seconds: a new slide, a new line, a highlight that moves.

R26 **Functional animation: one thing at a time, as it is said**

"The beauty of animation isn't because it looks cool. It's because it can focus the attention on the information sequentially." *[21:18]*

Bullet one appears, then two, then three [12:14]. If the whole list must stay up, "animate the highlight behind it" instead [12:10].

R27 **Tables, and the dramatic reveal**

"Tables are great at communicating information, especially when you animate them." *[29:59]* *"You can lay new information on top of old information. And this is really like a dramatic reveal."* *[31:38]*

THE REVEAL, STEP BY STEP duplicate the slide; remove what you no longer need; put a 100% solid white box over what should fade; bring its opacity to about 80%; lay the new line on top [31:00-31:48].

IN FLADDY Our revenue calculator is made for this: list, registrants, show-up, buyers, built row by row, then the "+$XK" revealed over the faded table.

R28 **Compare in threes**

"For some reason people pick up on three. I think two is a coincidence, but three is a pattern." *[38:45-38:53]*

R29 **Emojis as type**

"I use a lot of emojis these days for design, not because they're cute, but because they're functional." *[38:16]*

Copy, paste, set the size like a letter (24, 36, 48, 72 points). For us this is open: emojis, or our own stitch icons for counts (part 7).

1.6 Slides that come back

R30 **Three exposures**

"The first time somebody sees it, they're likely to forget it … Seeing it in three different ways from three different angles and three different perspectives massively increases the buyin." *[3:37-3:58]*

Show a key slide as a setup in the intro, again in the teaching, and a third time in the recap ("so far today we've discussed").

R31 **The intro tease: a slide inside a slide**

"So much of what you can do in the introduction to tease an audience is to just literally show a slide inside of a slide." *[2:58]*

Screenshot the later slides that teach each promised point, "very visual at a glance", one per slide under a small title [3:24]. End on a wall of every slide that fits, the last row cut off at the bottom [4:07-4:38].

R32 **The mechanism slide, and how it runs live**

"From a content perspective, these are the most important slides that you can have and I spend a lot of time designing on them because I'm going to be using them over and over again." *[23:04]*

HOW IT LOOKS the name very small and off-centre [23:45], small arrows, no "level 1, level 2", a short tagline under each step, built to be "flexible and easy to adjust" [24:31].

HOW IT RUNS

1. The first point is the biggest.
2. When it is done, tick it and make it smaller.
3. The next point becomes the biggest; the one after is "a little opaque" as a tease.
4. A coloured arrow points to where we are: "So now they always know where they're at. They always know where they're going" [24:35-25:00].

IN FLADDY Our mechanism is the 3-day event: Day 1 you teach, Day 2 you teach, Day 3 the cart opens, and we run it. It deserves the most design time of any slide, and it comes back in every section.

R33 **Two speeds for a crowded bullet slide**

UNDER A DEADLINE small title, regular bullets, bold lead-in words, no italics. ADVANCED one point per slide, large in the centre; the finished points stack small at the top left, ticked, "so you can know which one you are on" [13:43-15:22].

1.7 The call to action slide

R34 **"My favorite slide … Everybody should have it"**

"You see all of what you get over here. You see the value stack. You see the total. The total is big. This font is bigger than the investment font. This is the most important information which it's countdown to being unavailable. And then the call to action is impossible to miss. You see it at the bottom. It's in yellow. It's got a blue font because people are used to clicking through on blue links like that." *[41:47-42:14]*

```
Everything you get:                    Only available for: [countdown, never
covered]
[item] ..... [value]           [guarantee]
[item] ..... [value]
Total value  [$X]   (big)             Your investment: [price, smaller]
[ one full-width bar:   Get started now ->   theurl.com (link blue) ]
```

One call to action only [41:34]; no presenter photo ("He's big. We don't need him" [41:10]); questions answered live, not in a box [41:39]; the price not giant, because "$10,000 in a giant font seems more expensive than $10,000 in a smaller font" [41:22].

IN FLADDY On YouTube there is no price: the stack is what is in the free event plan, and the bar is theafterharvest.com. On a client's Day 3 deck this is the checkout slide exactly as he lays it out.

1.8 From his other three videos

DEVICE	WHERE
A printed sheet shot from above, his hand in frame, instead of a slide	The New Webinar 0:59
A table that grows or returns (old vs new, the covered rows highlighted); a from/to chart gaining a row per point, the finished chart as the recap	The New Webinar 6:35; The New Way to Sell 2:38-12:26
The turn as two-tone type ("all is not / lost"); the anti-pitch as a struck-through list	AI is mostly Bullshit 0:29, 0:39
A real list with the current row lit as he names it; one big total over its working; a report card, a grade per option ("C+ MVP")	AI is mostly Bullshit 10:34-16:32

On YouTube: teach first, sell soft and throughout, more than one kind of call to action, no invented scarcity	The New Webinar 7:18-11:08

PART 2

Our look

The After Harvest brand kit for slides. Everything here is in the brand kit folder (see the last page).

2.1 Sean's standards, in his words

DATE	WHAT HE SAID	WHAT IT MEANS FOR A SLIDE
28 Oct 2026	*"too much like Claude... templateized... doesn't feel human-touched"*	No templated stacks; every slide composed from its line
28 Oct 2026	*"It looks messy... It doesn't look nicely made"*	Crafted, clean, wide margins; a tilt reads human, disorder reads unfinished
28 Oct 2026	*"a little bit simpler and not overly after-harvest... just the foundations"*	The YouTube look adapts to any topic
28 Oct 2026	*"we're using a grotesque on our website ... body text and just use literata for a subheading"*	Hanken Grotesk body, Literata subheads, Olivera headlines
29 Oct 2026	*"in my slides, there to be real pictures, real screenshots"*	Every story or proof slide carries a real picture with its source
29 Oct 2026	*"I'm not a fan of putting tapes on the pictures. They're very generic"*	Never tape stuck on a photo
29 Oct 2026	*"they look like a very bad recreation of Deya's"*	Learn from Deya's tricks, never copy her layouts
29 Oct 2026	*"Let's just use HTML because you design better using HTML"*	Slides are built in HTML; the light set is the base

The designer brief for the VSL (Canva, "VSL ASSETS UPDATE"): Deya's peg, "but in our brand ... not girly ... a bit more neutral and connected to afterharvest branding", and "always add a space for Sean's facecard".

2.2 Colour

Paper
`#FBF8F1 · the ground`

Ink
`#262119 · all main text`

Rust
`#B06A4A · THE accent`

Sage
`#8A9068 · a band or a field`

Quiet
`#6E6554 · lead-ins, sources`

Cream
`#F3EEDF · type on sage or rust`

Card
#FFFEFA · prints, raised paper

Olive
#6F7452 · hand marks

Stitch gold
#C98A1E · a stitched number

The colour rule

Two colours per slide: ink, and rust on the one word or line that matters (Jason R15). Sage is only ever a ground. A rust panel (#9A5A3F) can be a ground too. The spark yellow (#E8A100) is for at most one tiny moment.

2.3 Type

VOICE	SAMPLE	USE
Olivera (demo)	The 3-day event	headlines; thickened with a 0.022em stroke. The demo has no punctuation: a Literata glyph stands in
Olivera Oblique	*for 3-day events*	the script line or word in a headline
Literata italic	*why creators are*	the small lead-in above a headline, sentence case
Hanken Grotesk 900	**WHICH ONE SELLS?**	the shout; bold lines
IBM Plex Mono	`theafterharvest.com`	typewriter lines, labels, source lines

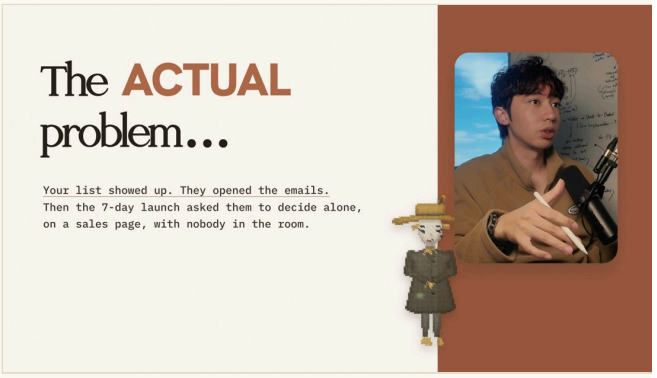

The type rules

At most two voices per slide, plus the source line. Sizes at 1920 x 1080: headline 112-176px, key line 56px+, supporting line 40px+, source 18-20px. Headlines are broken by hand, never by the browser. Sentence case. No em dashes in our copy.

2.4 The face

Sean's face cam is part of every slide, the way Deya's is: a big circle (or a rounded box), roughly a third of the frame, placed by the composition, not in a fixed corner. Things can touch it (the scarecrow stands beside it, a prop tucks behind it, a hat sits on it on a story slide), but nothing covers the key words, and the face never covers the highlight.

In the HTML the circle holds a placeholder photo (`sean-cam.jpg`); in the edit, the live camera replaces it.

The face as a rounded box on a rust panel, the stitched scarecrow standing beside it (s4).

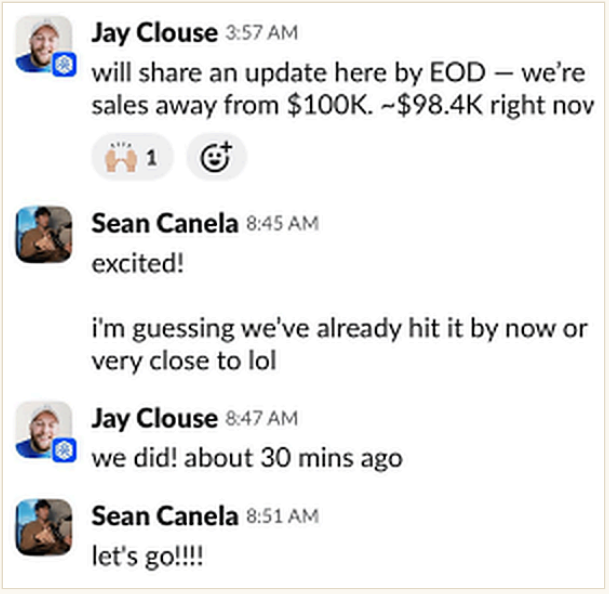

2.5 Real pictures

Best first: our own (the VSL Figma file holds many: the Launch Lab page and ticket, Jay's post and our chat with him, The Lab photos), then the real thing from the person we talk about, then licensed stock as a marked placeholder (`stock-*`), replaced before shipping.

- Shown as a print: a thin white border and a real shadow, tilted 2-6 degrees, overlapping a little.
- **Never tape.** Pin it, let it sit on the page, or let it run off the edge.
- One line of source under it, in Plex Mono: where it is from and the date ("x.com/jayclouse, 9:45 PM, 7/9/26").
- The key line highlighted, and only that line.
- Never retype a screenshot as boxes or fake a UI. A small source image is upscaled once and shown no bigger than it reads.

Real: Jay Clouse's post.

Real: our chat with Jay.

2.6 Props and stitch art

The props are photo cut-outs made in Canva; the stitch art is After Harvest's own cross-stitch (the same family as the website). Use at most two per slide, at the edges, never touching the key words. Each should mean something: wheat is the harvest (results), the ticket is the event, the folders are chapters, the scarecrow is us.

wheat

tickets

folder

straw hat

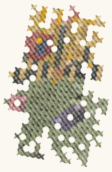

graph paper

receipt

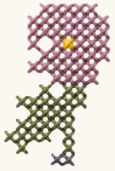

envelope

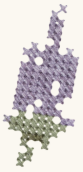

scarecrow

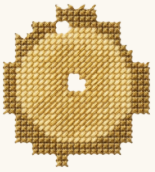

scarecrow

wheat bundle

rose

flower

lavender

coin

check

Numbers and short words can be cross-stitched in code: `<div data-stitch="$100K" data-cell="15" data-color="#C98A1E">` (`stitch.js`).

2.7 Hand marks

circle

loop arrow

One precise mark per slide at most: the olive circle or loop arrow, or a mark drawn with **`ink.js`** (a wobbly underline, circle, arrow or cross-out). A circle never crosses the letters it marks. No handwriting font on slides.

2.8 Never

NEVER	WHY
Tape stuck on a photo	Sean, 29 Oct: "very generic"
The caps label / serif headline / italic line stack on every slide	Sean, 28 Oct: "very Claude"
A row of identical cards, evenly spaced; the same shadow on everything; confetti	template tells
Website parts rebuilt as boxes; a fake UI	show the real screenshot instead (R8)
Office stock photos as if they were ours	R7: stock only as a marked placeholder

Gradients, glows, neon, gears, AI-busy pictures	Jason's "before" slides `[23:31, 35:03]`
The number, the title or the price as the biggest thing	R12
Numbering 1, 2, 3 on three items	R19
Invented copy, a fake fact, a fake testimonial or count	facts only, each with a source
Copying Deya's compositions	Sean, 29 Oct: "a very bad recreation of Deya's"

PART 3

The layouts

The eleven slides of the light set are the base. Use them as templates: pick by the job the line has to do, never the same layout twice in a row.

File: **`templates/youtube/youtube-light.html`**. Each slide is one **`<section>`**; copy it, change the words and pictures, render. The "audit" line is what part 6 says still needs fixing on that slide.

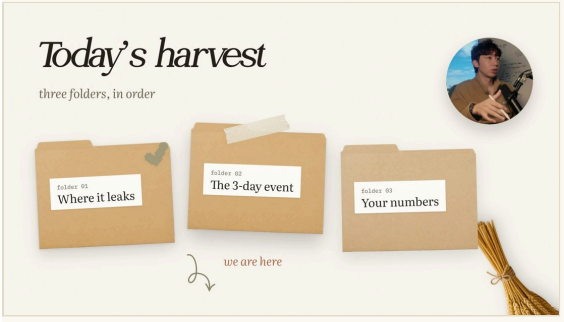

`s1 · title · job: the promise`

Title

Three voices: a Literata lead-in, a Hanken shout, an Olivera script line, and a small aside. The face big on the right; props at the edges (wheat, tickets).

Buildlead-in, shout, script line, aside.

Audit: five colours on it; keep rust only on the script line.

`s2 · agenda · job: where we are going`

Agenda (the map)

Kraft folders for the chapters, a tick on the finished one, a hand arrow "we are here". It returns at every chapter (R30, R32).

Buildfolder 1, 2, 3; on each return the tick and arrow move.

Audit: make the current folder biggest and lifted, the done one small and ticked, the next faded.

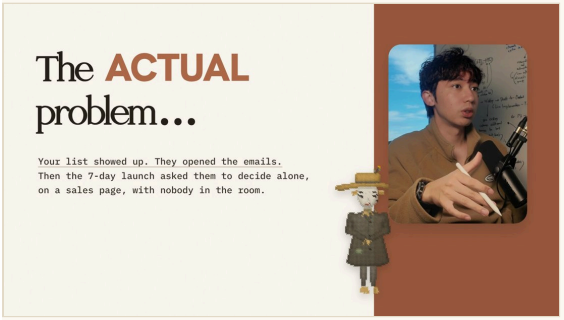

`s3 · part title · job: a new chapter`

Part title

A sage band across the top, a stitched number, the title in cream, the face over the band edge; the real thing for the chapter under the band.

Buildband and title, then the real thing, then its note.

Audit: remove the tape; title as a sentence ("Three days, then the cart opens.").

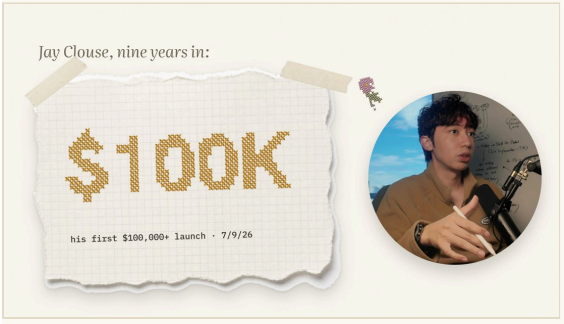

s4 · the turn · job: name the real problem

The actual problem

A two-weight headline with the turn word in rust, a full-height rust panel, the face in a rounded box, the scarecrow beside it.

Buildheadline, then the evidence.

Audit: it tells; show the real 7 launch emails, then the lone sales page.

s5 · the number · job: one fact that lands

The number

A stitched figure on torn graph paper, a lead-in above, the source line under it.

Buildlead-in, then the figure, then the source.

Audit: the number is the biggest thing (R12); make the meaning big and show the real post.

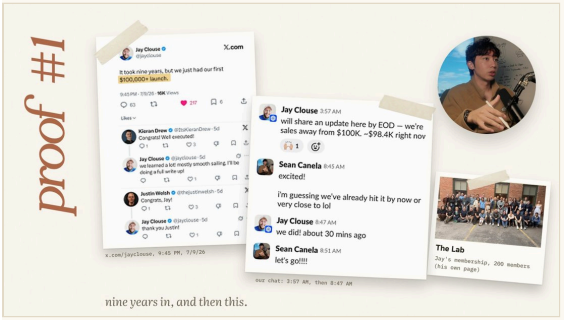

s6 · step + screen · job: one step, shown

Step and screen

A tiny "step 3:", a huge lowercase line, the real screen on the right, a sticker carrying one fact.

Buildlabel, line, screen, the fact.

Audit: confirm the plan card is a real client's, or label it a sample.

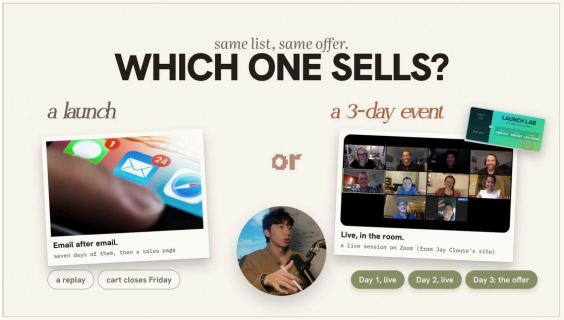

s7 · proof · job: show it happened

Proof

"proof #1" up the edge, the real post with the key line highlighted, the chat, the source lines.

Buildthe post, the highlight; next slide the chat lines one by one.

Audit: three proofs on one slide; split into three; no tape.

s8 · split · job: a contrast

Which one?

A question title, two sides (the old way faded, the new way lit), "or" stitched between, short chips.

Buildquestion, left side, "or", right side, chips.

Audit: replace the stock inbox with our real one; plain prints, not polaroids.

s9 · story break · job: a story starts

Story time

A pill, a centred title, the real line from the story, the face below wearing the straw hat.

Buildpill, title, then the real message.

Audit: show the real chat message instead of typing it.

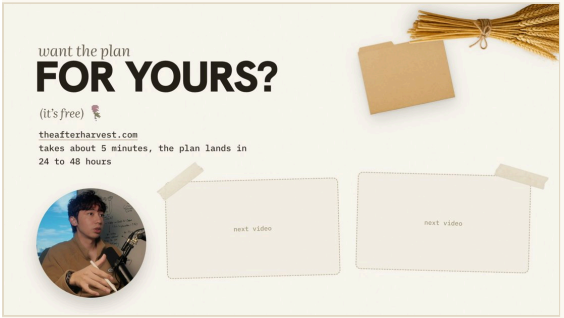

s10 · list · job: reasons

The list

A sage field, a title, the reasons each with a picture, a closing line, the face on the right.

Buildone reason per slide, then all three together as the recap.

Audit: stock photos, numbering, label title. Question title; real things; no numbers.

s11 · end screen · job: the one next step

End screen

The soft call to action, the URL, the time it takes, and the two video tiles YouTube fills in the last 20 seconds.

Buildthe question, the stack of what is in the plan, then the URL bar.

Audit: show what is in the plan, as Jason's stack without a price (R34).

3.2 Six layouts still to make

Jason's method needs these and the light set does not have them yet. Build them in the light set's style.

LAYOUT	WHAT IT IS	RULE

The mechanism	Day 1 you teach, Day 2 you teach, Day 3 the cart opens; four states: all even, Day 1 current, Day 2 current (Day 1 ticked small, Day 3 faded), Day 3 current; a rust arrow on the current day	R32
The intro tease	later slides shown as slides inside a slide, one per point, then a wall of slides cut off at the bottom	R31
The recap	"So far:" the mechanism and the proof brought back, smaller, ticked	R30
Table + reveal	the revenue calculator built row by row, then the white veil and "+$XK" on top	R27
The countable grid	a number shown as things: registrants as people, years as calendars	R9
The plan stack (CTA)	what is in the free event plan, one bar with theafterharvest.com	R34

PART 4

The process

From a line in the script to a finished slide. Do the steps in order; most mistakes come from skipping step 3.

---

1. **Get the script, line by line.** The video's script or its transcript. Number the lines. Each slide starts from one exact line, never from a layout.
2. **Fill one slide card per line** (below). The belief comes first: what must the viewer believe after this slide that they did not before?
3. **Ask "How do we show this?"** (R5) and find the real thing. Where to look: the VSL Figma file, our Drive, the lead's own pages, our chats and emails, the calculator, screenshots you take now. Write the source line while you have it.
4. **Split.** One idea per slide (R24). If the card has two beliefs, it is two cards.
5. **Pick the layout by the job** (part 3): promise, map, chapter, turn, number, step, proof, contrast, story, list, call to action. Never the same layout twice in a row.
6. **Decide what is biggest** (R12): the words that carry the belief. The title goes small unless it is the belief.
7. **Write the build** (R25, R26): the order things appear, matched to the words as they are said. In teaching, something new every 5-10 seconds.
8. **Build it in HTML.** Copy the layout's `<section>` from `templates/youtube/youtube-light.html` into the video's own file; put new pictures in `templates/youtube/art/real/` with a row in its `SOURCES.md`; render with `python3 scripts/render_slides.py <file.html>`.
9. **Check it** against the per-slide checklist (part 5). Look at the render at full size and at phone size.
10. **The deck pass.** The mechanism returns with its states, the agenda returns, there is an intro tease and a recap, the call to action is one slide with one action (part 5, deck checklist). Then send the slides to Sean one by one, full size, no contact sheet. Write any new standard he sets into `rulings.md` the same day.

4.1 The slide card

```
SLIDE  [number]                          LINE  [the exact words from the script]

BELIEF    what they must believe after this slide
SHOW      "How do we show this?"  the real thing (file + source line)
BIGGEST   the words that carry the belief
JOB       promise / map / chapter / turn / number / step / proof / contrast / story / list /
CTA
LAYOUT    s1-s11, or a new one (part 3.2)
BUILD     1. ...  2. ...  3. ...   (as said; every 5-10 s)
PROPS     at most two, at the edges, each meaning something (or none)
CHECK     part 5 per-slide checklist done
```

4.2 A worked example

```
LINE      "It took Jay nine years to get to his first $100K launch."
BELIEF    a creator with a real audience can still wait years for one big launch
SHOW      nine crossed-off calendar years, then Jay's real post (x.com/jayclouse, 9:45 PM,
7/9/26)
BIGGEST   "nine years" and "his first $100K launch" (not the number alone)
JOB       number
LAYOUT    s5, with the calendars instead of the stitched figure
BUILD     1. the nine calendars appear  2. they cross off one by one  3. the post slides in
          4. the key line highlights
PROPS     none (the calendars are the picture)
```

4.3 Building the steps in HTML

Until the build tool is written, make one copy of the slide per step (s5a, s5b, s5c), each adding one element, and render them all; they play as the build when cut into the video. The planned tool: a **`data-step`** number on each element and a render per step.

PART 5

Checklists

Tick every box before a slide or a deck goes to Sean.

Every slide

- [ ] It starts from one exact line of the script
- [ ] One idea; one belief written down
- [ ] "How do we show this?" answered with a real thing
- [ ] Every real picture has a source line under it
- [ ] Only the key line is highlighted
- [ ] No stock photo, unless marked as a placeholder
- [ ] No tape on any photo
- [ ] The biggest words carry the belief
- [ ] Not the title, the number or the price as the biggest thing
- [ ] The title tells the story (a sentence or a question)
- [ ] Reads top to bottom
- [ ] Two colours: ink and rust (sage only as ground)
- [ ] At most two type voices, plus the source line
- [ ] Key line 56px+, supporting 40px+
- [ ] No numbering on three items; no abbreviations
- [ ] At most two props, at the edges, each meaning something
- [ ] One hand mark at most; it never crosses letters
- [ ] The face is there; nothing covers the key words
- [ ] Nothing collides; margins about 112px
- [ ] The build order is written
- [ ] No invented fact, count or quote
- [ ] No em dashes; sentence case

Every deck

- [ ] An intro tease (slides inside a slide)
- [ ] The agenda returns at each chapter, with progress
- [ ] The mechanism slide exists and returns with its states
- [ ] Each key slide is seen three times
- [ ] A recap ("so far")
- [ ] Never the same layout twice in a row
- [ ] Something new every 5-10 seconds in teaching
- [ ] One call to action slide, one action
- [ ] The same pictures return and change (storyboard)
- [ ] Every new picture has a row in SOURCES.md

Before it goes to Sean

- [ ] Rendered at full size and looked at
- [ ] Looked at again at phone size
- [ ] Sent one by one, full size, no contact sheet
- [ ] Any new standard he sets goes in rulings.md the same day

PART 6

Audit of the current slides

The light set (11 slides) checked against Jason's method. Full version: `audits/2026-10-29-light-set-vs-jason.md`.

The light set already does several things Jason asks for: real screenshots with the source under them, a question as a title, an agenda that shows where we are. What it misses is everything that happens *over time*: it is 11 still pictures, when his decks are hundreds of slides built one line at a time, with a mechanism slide that comes back and a recap. **The look is the strong part; the method is the missing part.**

The six fixes that matter most

1. **Design the builds**: one idea per slide, each with its build order; the 11 become about 40 (R24-R26).
2. **Make the 3-day event the mechanism slide**, the most designed slide, back with progress in every section (R32).
3. **Replace every stock photo** with a real thing of ours (s8, s10) (R7, R8).
4. **Never make the number the biggest thing** (s5): the meaning big, the number as the real screenshot (R12).
5. **Two colours per slide**: ink plus rust; props at the edges (R15, R20).
6. **Bigger type**: key line 56px+, support 40px+ (R18).

Deck-level findings

RULE	THE LIGHT SET	FIX
Slides are free (R24)	several slides carry 2-3 ideas	s7 into 3, s10 into 4
Motion every 6 s; build as said (R25, R26)	no builds designed	a build order for every slide
The mechanism slide (R32)	the 3 days only as a note and chips	build it with its four states
Three exposures; recap (R30)	no recap	add "so far"
Intro tease (R31)	agenda is a list of names	slides inside a slide after s1
Least important not biggest (R12)	s5 number biggest; s10 numbers	see slides
Titles tell the story (R13)	s3, s4, s10 are labels	sentences or questions
Two colours (R15)	up to five colours (s1)	ink + rust
Bigger fonts (R18)	body 27-32px, captions 19px	56/40px
Real proof, no stock (R7)	stock on s8, s10	our inbox, Zoom, calendar invite, checkout
Screenshot + source (R8)	sources on s3, s5, s7, s8	keeps; add highlights on s3, s6

Metaphors (R10)	"harvest" over office folders	one or the other
Countable numbers (R9)	none	nine years as calendars
The CTA slide (R34)	URL and time, no stack	what is in the plan, one bar

Slide by slide

SLIDE	KEEPS	BREAKS	FIX
s1 title	the face big; the promise	five colours	rust only on the script line; fewer props
s2 agenda	a tick and "we are here"	all folders equal; mixed metaphor	current biggest, done small, next faded
s3 part two	real page and ticket, source	tape; label title; days as a note	no tape; a sentence title; then the mechanism
s4 problem	the turn word in rust	all telling; small mono text	show the 7 emails, then the lone sales page
s5 number	source line; stitch	the number is biggest	meaning big; calendars; the real post
s6 step	real artefact; small step label	plan card origin unchecked	confirm real or label sample
s7 proof	real screenshots, sources, highlight	three proofs on one slide; tape	split into three; no tape
s8 which	question title; contrast on one slide	stock inbox; crowded	our inbox; plain prints
s9 story	story break; real quote	quote typed	the real chat message
s10 list	rule of three	stock; numbering; three at once	one per slide, then together; no numbers
s11 end	one soft CTA, no scarcity	plan contents not shown	the plan stack, one URL bar

What to make next, in order

1. The mechanism slide and its four states; the agenda with its progress states.
2. s4, s5, s7 and s10 rebuilt, one idea per slide, with real things.
3. The builds for every slide.
4. The intro tease and the recap.
5. s11 as the plan stack.
6. Type sizes and colours checked on every render.

PART 7

Decisions for Sean

Where Jason's method and our look disagree. Until Sean answers, the house rule in the last column applies.

#	JASON	OUR LOOK TODAY	HOUSE RULE UNTIL DECIDED
1	"better to look ugly than pretty" [16:06]	"nicely made" (28 Oct)	crafted and warm, never slick
2	cut what does not persuade [5:34]	full and a little playful (28 Oct)	two props at most, at the edges
3	one font, three faces, no italics [13:35, 33:10]	three type voices (28 Oct)	two voices per slide at most
4	the webcam beside the slide; no presenter photo [11:58]	the face circle on every slide (brief)	keep for YouTube; webinar decks to decide
5	~500 slides, motion every 6 s [28:44]	11 still slides	builds every 5-10 s in teaching
6	emojis as count icons [37:54]	stitch icons and props	our stitch icons
7	no AI pictures [20:05]	Canva-made props	props yes, as props only; never as proof
8	CTA in a yellow bar, blue link [41:47]	our colours	our colours; the link in rust, underlined
